DETAILED ACTION

Election/Restrictions

Applicant is required to make six species elections with a single species election from each of the six categories listed below.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Category A: parameter type (claims 1 and 8-9)

Species A-1: anatomical

Species A-2: physiological

Species A-3: genetic

Justification: Each type of parameter is based on physically distinct biological parameters.

Category B: application type (claim 3)

Species B-1: intravenous

Species B-2: intra-arterial

Species B-3: intraperitoneal

Species B-4: intramuscular

Species B-5: subcutaneous

Species B-6: topical

Species B-7: oral

Species B-8: inhalative

Justification: Each species of these delivery methods involves a distinct application type.

Category C: physiological parameters (claim 4)

Species C-1: blood flow rates

Species C-2: volumes and compositions of individual organs

Species C-3: gene expression data of metabolically active enzymes or active transporters.

Justification: Each parameter is based on physically distinct physiological properties.

Category D: substance species parameters (claim 5)

Species D-1: lipophilicity

Species D-2: binding constants to plasma proteins

Species D-3: free fraction in plasma

Species D-4: solubility

Species D-5: permeability coefficient

Species D-6: molar volume

Species D-7: organ/plasma or organ/blood distribution coefficient

Justification: Each substance specific parameter is based on a physiologically distinct property.

Category E: numerical optimization methods

Species E-1: gradient methods

Species E-2: gradient-free methods

Species E-3: stochastic methods

Justification: Each numerical optimization method is based on mathematically distinct properties.

Category F: dosage device

Species F-1: electronically controlled infusion pump

Species F-2: inhaler

Species F-3: electronically controlled release capsule for oral application

Justification: Each dosage device operates under distinct physical principles.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the central PTO Fax Center.
